God’s Word For The Week

“Now when Jesus came into the district of Caesarea Philippi, he asked his disciples, “Who do people say that the Son of Man is?” And they said, “Some say John the Baptist, others say Elijah, and others Jeremiah or one of the proph-

ets.” He said to them, “But who do you say that I am?” Simon Peter replied, “You are the Christ, the Son of the living God.” And Jesus answered him, “Blessed are you, Simon Bar-Jonah! For flesh and blood has not revealed this to you, but my Father who is in heaven. And I tell you, you are Peter, and on this rock I will build my church, and the gates of hell shall not prevail against it. I will give you the keys of the kingdom of heaven, and whatever you bind on earth shall be bound in heaven, and whatever you loose on earth shall be loosed in heaven.” Then he strictly charged the disciples to tell no one that he was the Christ.”

Wasn't That Lucky?

There are so many wonderful things about the planet on which we live that we never think about. If all things were not exactly what they are, we could not live on planet Earth!

For example the Earth is slanted on its axis at precisely 23.5 degrees, if it was not, there would be no seasons as we know them. The tropics would be hotter, and the deserts would get bigger. If the tilt went all the way over to 90 degrees, much of the Earth would alternate between very cold winters and very hot summers.

The Moon is 240,000 miles from the Earth. This is also exactly as God planned since the Moon helps to control the movement of ocean tides. Tides are helpful because they cleanse the shorelines and help ocean life prosper. Without our tides the water in the ocean would stagnate and the fish and plants would die. That is why our existence on the Earth depends to a large degree on the Moon being just the right distance from the Earth.

The oceans are also an example of perfect design. Water covers about 72% of the Earth's surface, which is good because the oceans provide a reservoir of moisture that constantly evaporates and condenses. This causes rain to fall on the Earth. It is a well known fact that water heats and cools at a much slower rate than a solid land mass, which is why deserts can be blistering hot in the daytime and freezing cold at night! The vast quantity of water on our planet provides a natural heating and cooling system for the land areas.

Another well known fact is that humans and many animals breathe in oxygen and breathe out carbon dioxide. Plants, on the other hand, take in carbon dioxide and give off oxygen. Humans and animals depend on the plant world for a constant, fresh supply of oxygen. Approximately 50% of all oxygen comes from tiny, microscopic plants within the Earth's oceans and seas.

The Universe is huge, well-designed, and runs more efficiently than just about anything we know about. The Earth is the right distance from the Sun. It is exactly the right distance from the Moon. It has the right tilt on its axis. It has exactly the right amount of oxygen as well as countless other things. Could all these things be "just right" by accident or should I say "wasn't that lucky?" No that is not luck it is design so Romans 1:20 tells us, "For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made." Where there is design it means that there is a designer! Who is this designer? His name is God! Shalom, Harold
